CASCADE Terrace Awning

The CASCADE Terrace Awning is designed to combine an effective shelter from the sun with the pleasure to fully enjoy the outdoor space.

The structural elements feature a particularly minimalist profile, which reduces the aesthetic impact, maintaining functionality.

The CASCADE is a highly versatile solution: it can be installed against the outer wall or it can be self-supporting and, by coupling more modules, you can create large sheltered spaces.

CASCADE Terrace Awning

There are several possibilities for customization: from the finishes to the accessories and automations, operated by remote control.

Vertical Awnings

Vertical Awnings are the perimiter awnings designed to complete the CASCADE Terrace Awning.

Perfectly integrated into the supporting structure, it is available with a filtering or blockout fabric.

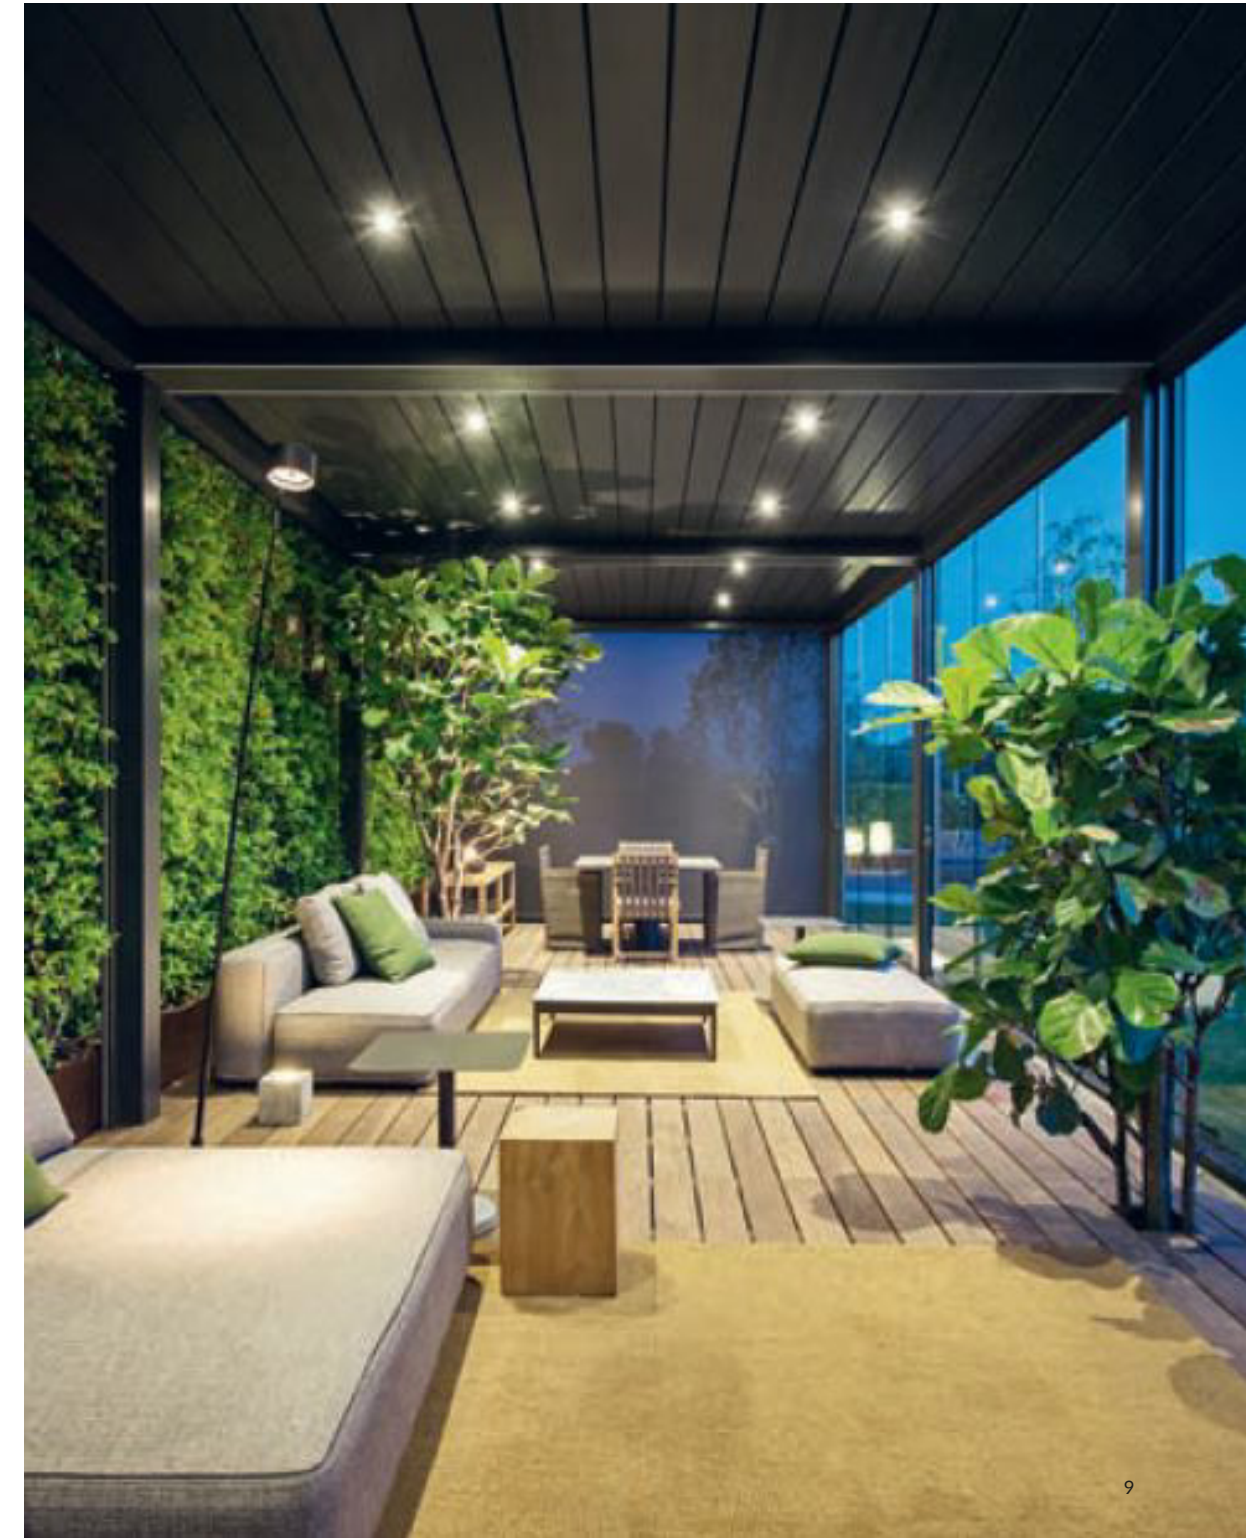

LED RGB

The perimeter RGB LEDs including white or white only, integrated into the structure, illuminate the areas under the pergolas creating spectacular visual effects.

The colours and intensity are adjustable with a remote control.

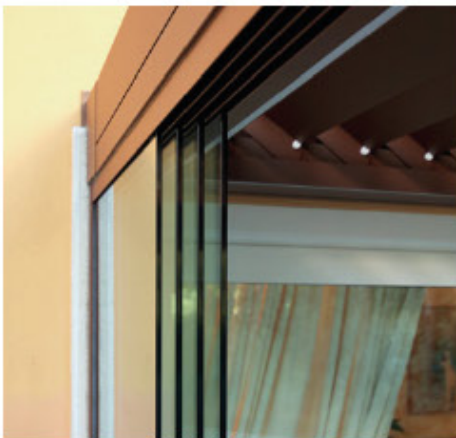

Spot Light

The Spotlights, featuring a white dimmable light, are recessed lights that can be installed into the blades in any position, to meet any lighting requirement.

Sliding Doors

Glass sliding doors allow to create various closing combinations which combined with the CASCADE Terrace Awning create a completely sheltered room.

Technical features

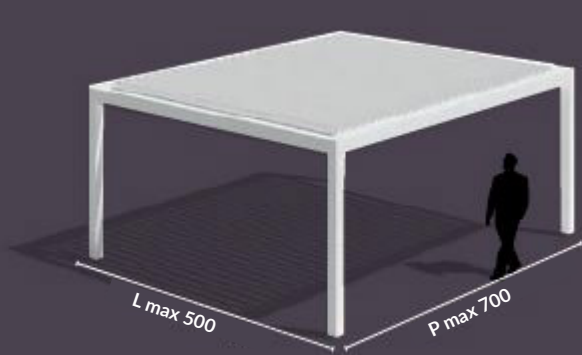

- Maximum dimensions of a single module: 700 x 500 cm.
- Structure and shading blades entirely aluminium-made.
- Customized structure: self-supporting wall installation, combinable with existing structures or supports.
- Multiple structures can be combined.
- Drainpipes and gutter integrated in the structure perimeter for water drainage.

Optional

- Perimeter Vertical Awnings integrated in the structure.
- Perimeter Sliding Doors.
- LED lights integrated into the cover profiles available with RGB light (white light included), or with white light only, operated by remote control.
- Temperature, rain, wind, snow sensors.
- Wireless devices, that automatically detect light and control opening and closing of the blades.
- Remote Control: up to 42 functions for an easy control of blades, LEDs and Vertical Awning closures.
- Variable depth system: structure with customized depth.

Advantages

- Natural light and shade comfort: the 140° opening rotation of the blades ensures the desired light and shade, the overheating of the building and of the glass walls.
- Uniqueness and safety: several patents have been registered in order to guarantee the uniqueness of the product.

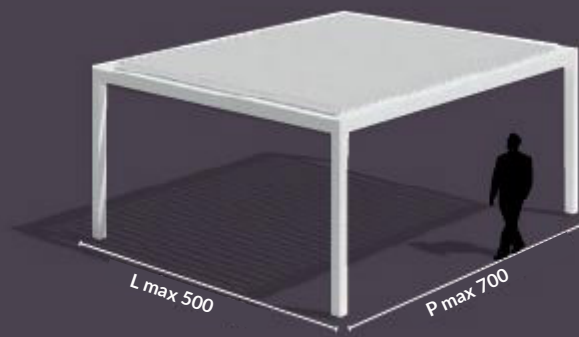

Maximum dimensions single module.

Structure with modules coupled on the depth side and on the width side.
